Talk Outline

- Entertainment Technology Center projects
- Games to bring biomes into the classroom for children ages 8-11
 - *Hello Ocean* (Imagica)
 - *Arctic Stars: The Far North* (Xuyan Ke)
- Iterative playtesting/development cycles
- Pointers for further information

ETC: Art + Technology

- 2-year professional graduate degree: Master of Entertainment Technology
- Students work on semester-long projects

Bring Biomes into Classrooms

- Sponsored by Benedum Foundation
- Can West Virginia students experience more of the world in their classrooms through tablets?

ETC Imagica: Caribbean Reef

Imagica: 15 weeks, 6 Students

Producer, UX designer, 2D/3D artist, animator, interaction & tech programmer

Iterative Playtesting with Imagica

- Tablet-driven experience for 8-11 year olds
- Marine biologist validates content
- Child-testing confirms appeal of experience

Y.E.T.I.: 15 weeks, 6 Students

Producer, designer, programmers, rigger and animator, 3D and environmental artist

Iterative Playtesting with Y.E.T.I.

- An educational game that takes players into the Arctic tundra, introduces them to its life forms, and gives them a feeling of discovery
- Tundra wildlife expert validates content
- Child-testing confirms appeal of experience

Biomes for Learning

- High visual fidelity
- High navigational freedom
- See paper and reference to Maria Harrington's work, *The Virtual Trillium Trail and the Empirical Effects of Freedom and Fidelity on Discovery-Based Learning*, *Virtual Reality* **16**, 2, 105-120 (2012)

Design Constraints

- Open children's awareness to other nature biomes
- Be very easy to use
- Offer the opportunity to explore a (visually) rich environment
- Be simple and complete (not vertical slice)
- The experience should start a conversation. It does not need to provide the lesson: teachers can use it as motivation....

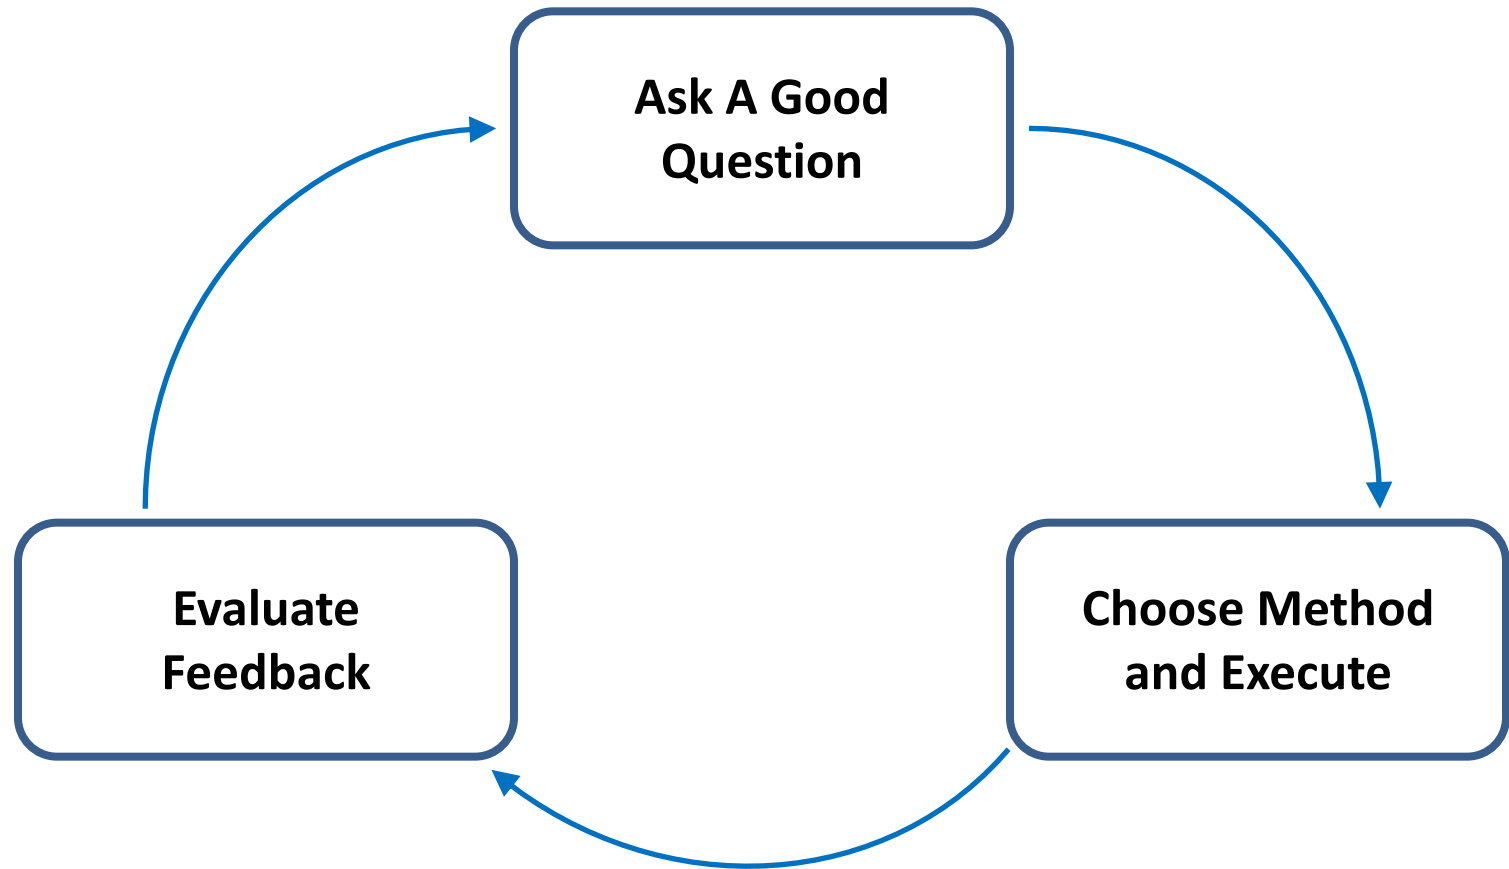

Learning Feedback Loop

Pintrich, P. R. (2000). The role of goal orientation in self-regulated learning. In M. Boekaerts, P. R. Pintrich, & M. Zeidner (Eds.), *Handbook of self-regulation* (pp. 451-502). San Diego: Academic Press.

Playtest Refinement Loop

Imagica Building Blocks - 1

Design research with marine biologist

Imagica Building Blocks - 2

Terrain building

Imagica Building Blocks - 3

Asset creation: Ocean environment and fish

Imagica Building Blocks - 4

Designing interactions for player

20

Aggressive

Caribbean Reef Shark

Barracuda

Community

Blue Tang

Eagle Ray

Special

Puffer Fish

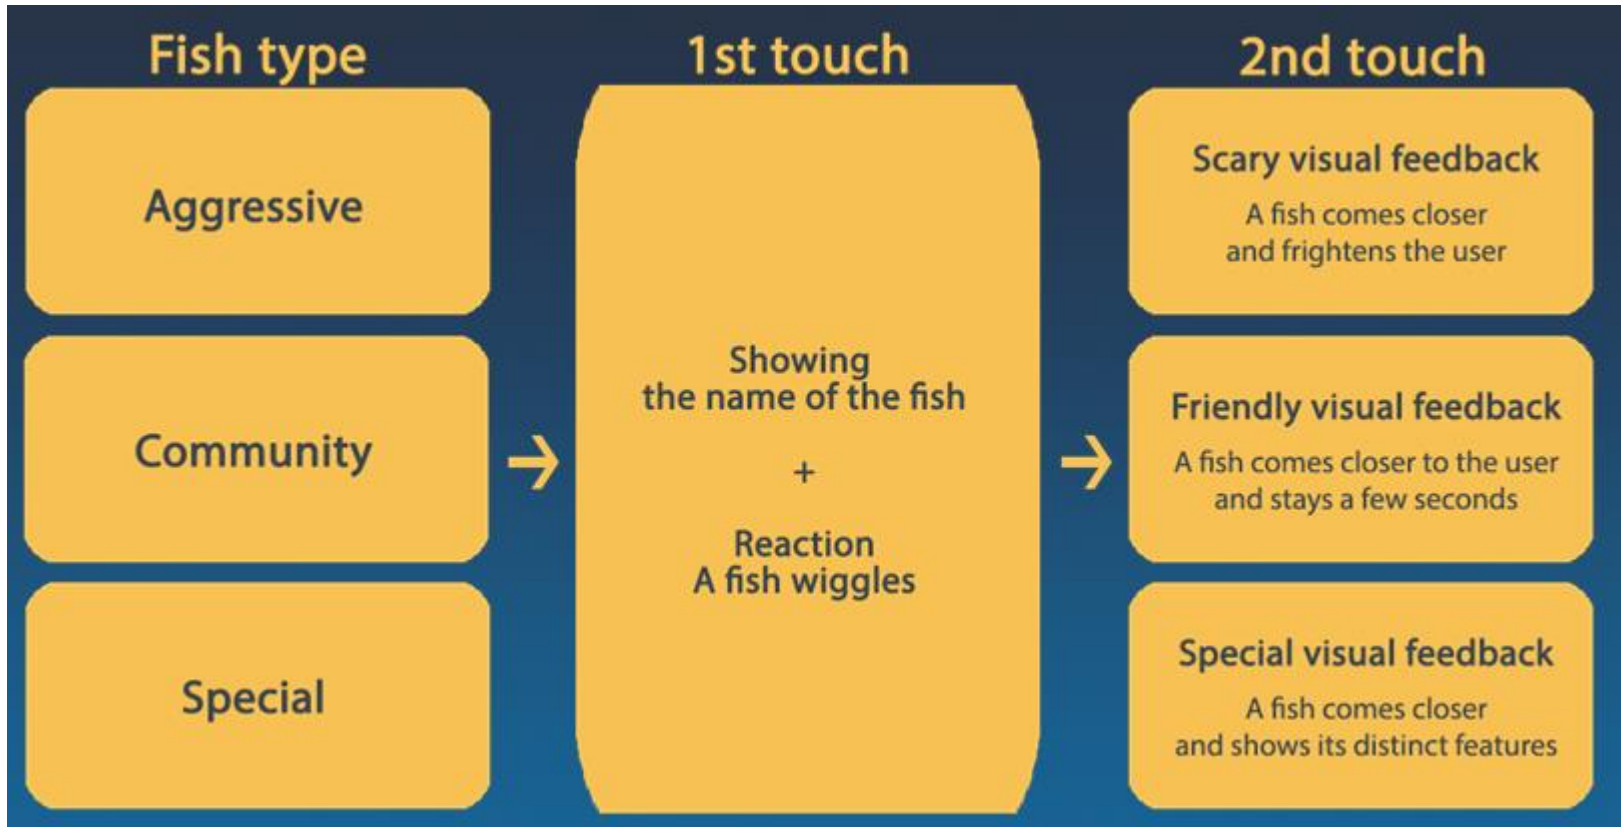

Jellyfish

Imagica Building Blocks - 5

(Note: First iteration had 1st, 2nd, 3rd touch interactions)

Imagica Building Blocks - 6

Interactive experience about exploring underwater biome

Imagica Building Blocks - 7

Visual Enhancements (fog, shaders, “God rays”)

Imagica: Pieces for Playtest

Terrain

Water Environment

Art Assets

Touch Interactions

Imagica Early Prototyping

K-1st Grade (ages 5-7)

- Difficult to hold tablets
- Became tired
- Preferred sitting
- Confused by untraditional navigation

2nd – 5th Grade (ages 8-11)

- Enjoyed tablet experience
- Easily interacted with fish
- Excited to take pictures
- Wanted more fish

More Imagica Playtest Iterations

- Modified 3-touch mechanism to 2-touch (juiciness, surprise)
- Emphasized player discovery: revised terrain
- Teacher resources

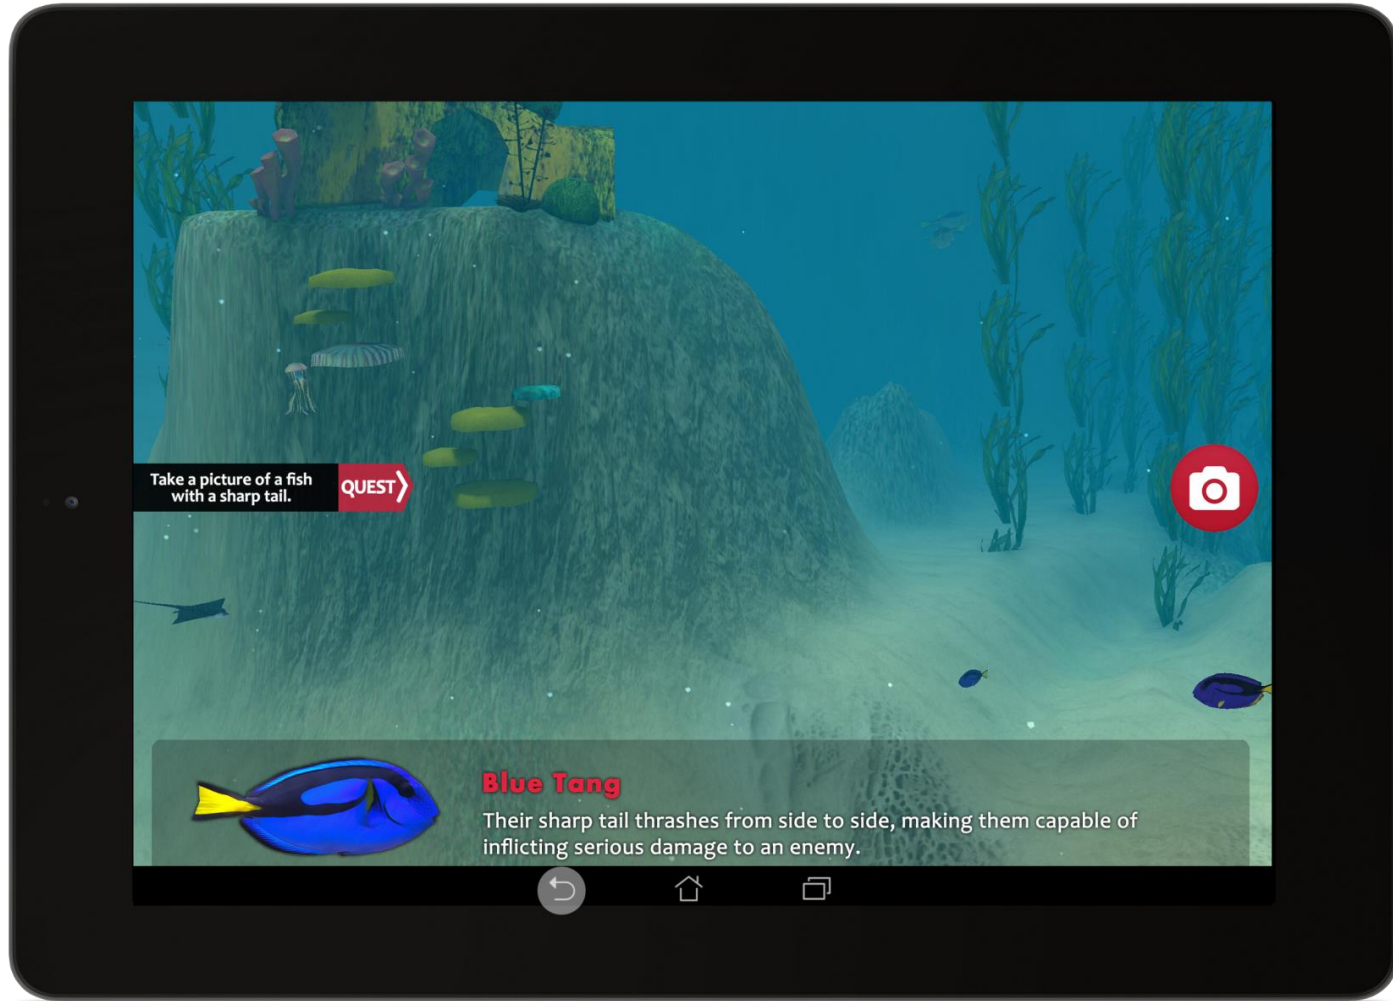

Imagica UI: Menu

Imagica UI: Explore

Imagica UI: Explore Quest

Imagica: Redesigned Quests

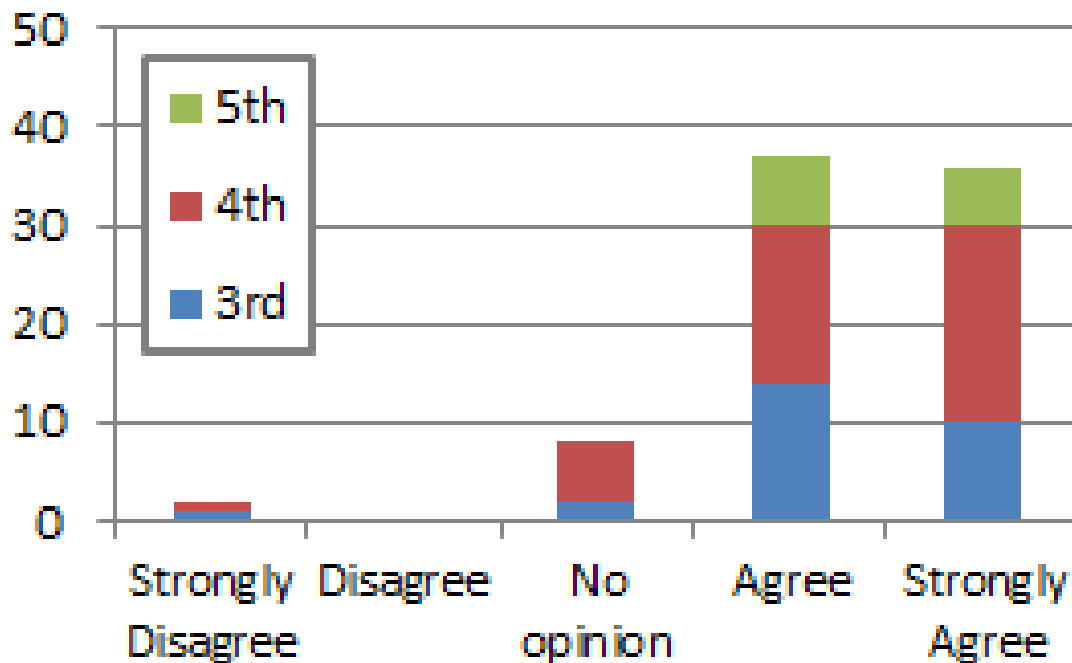

- Quests initially shifted focus away from exploration
- Revised quests:
 - Can be turned on or off
 - Quests don't start immediately (explore first)
 - Quests can be abandoned
 - Quests can be shown again
 - Quests tied to sea creatures and fun facts

Imagica: Child Reactions

83 playtesters in grades 3-5 (ages 8-11)

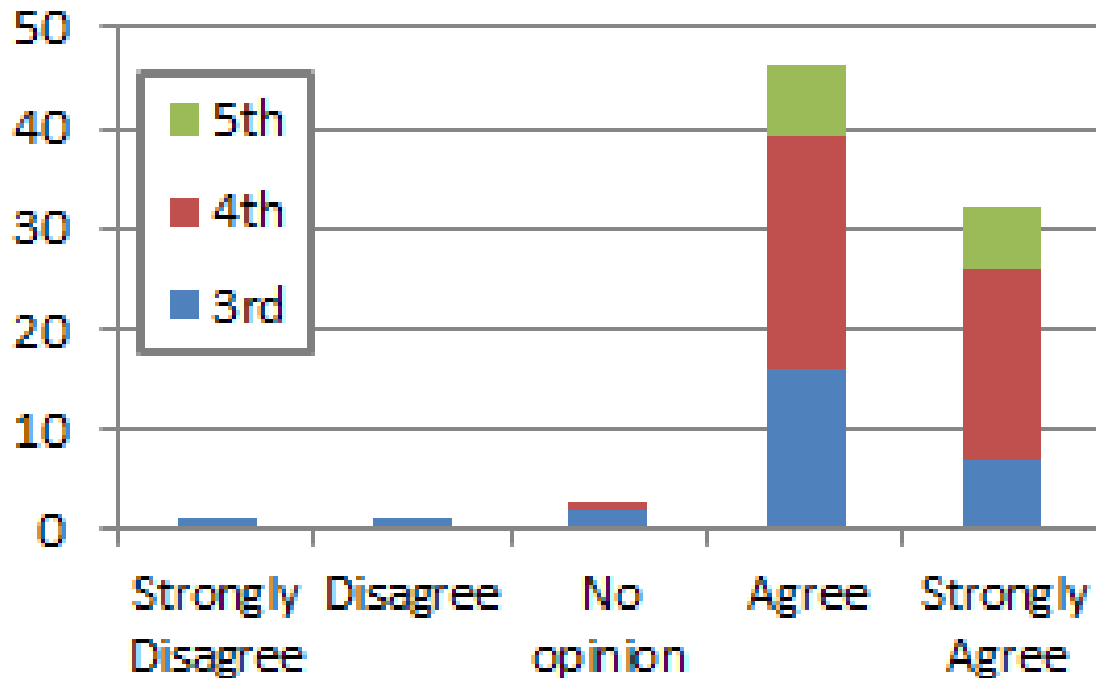

Response to “I know more about the ocean.”

Imagica: Child Reactions

83 playtesters in grades 3-5 (ages 8-11)

Response to “I know more about the fish.”

Imagica: Child Reactions

83 playtesters in grades 3-5 (ages 8-11)

Response to “Solving quests is”

LEARN

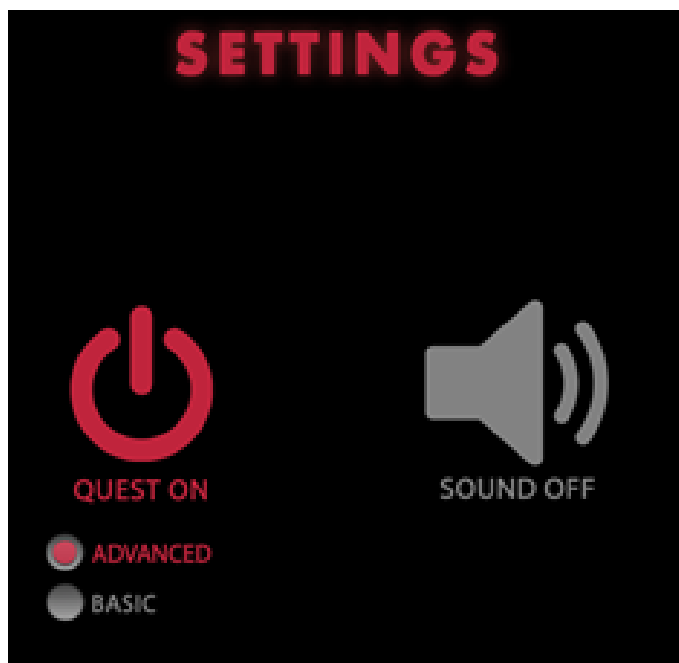

WORK

PLAY

Imagica: Updated Quests

YETI and the Arctic Tundra

- High visual fidelity, high navigational freedom tablet experience

Y.E.T.I. Classroom Playtest

- ~65 children (grades 3-5)
- Main playtest goals
 - Response to mechanics
 - Response to objectives
 - Information retention
- Data collection
 - Observation
 - Interviews
 - Written surveys
 - Data from Amazon Web Server game logs

Y.E.T.I. Playtest Lesson

Virtual joystick was generally well understood

Sneak button was initially a source of confusion

Y.E.T.I. Revised Clue Feedback

Teaching Standards

- SC.O.4.2.8 - Construct and explain models of habitats, food chains, and food webs

Teaching Standards

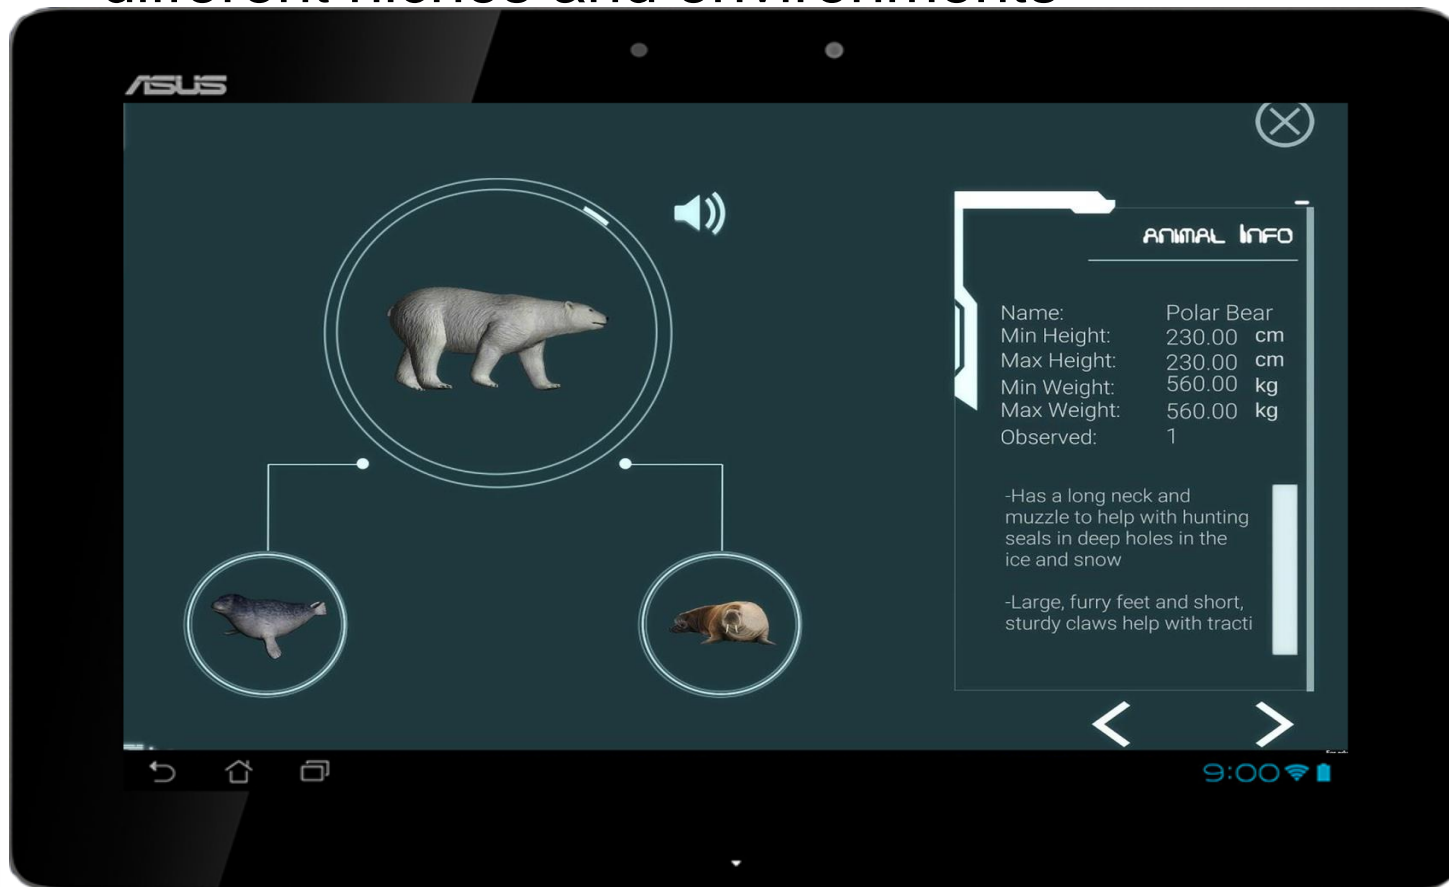

- SC.O.4.2.8 - Design and conduct simple investigations; observe, collect and record information

Teaching Standards

- SC.O.4.2.8 - Describe the different characteristics of plants and animals, which help them to survive in different niches and environments

Y.E.T.I. Later Playtests

- 14 children ages 8-11 outside of school
- 71 students in 4 classrooms at the client school (2 classes who saw the earlier version and 2 fresh classes)
- 20 students at the school who saw an earlier version for their commentary on the final release

Y.E.T.I. Playtest Insights

- Persistent attempts to use gestural and touch input (e.g., binoculars, zoom)
- Lack of tactile aspect for virtual joystick affected usability

Y.E.T.I. Interface Adjustments

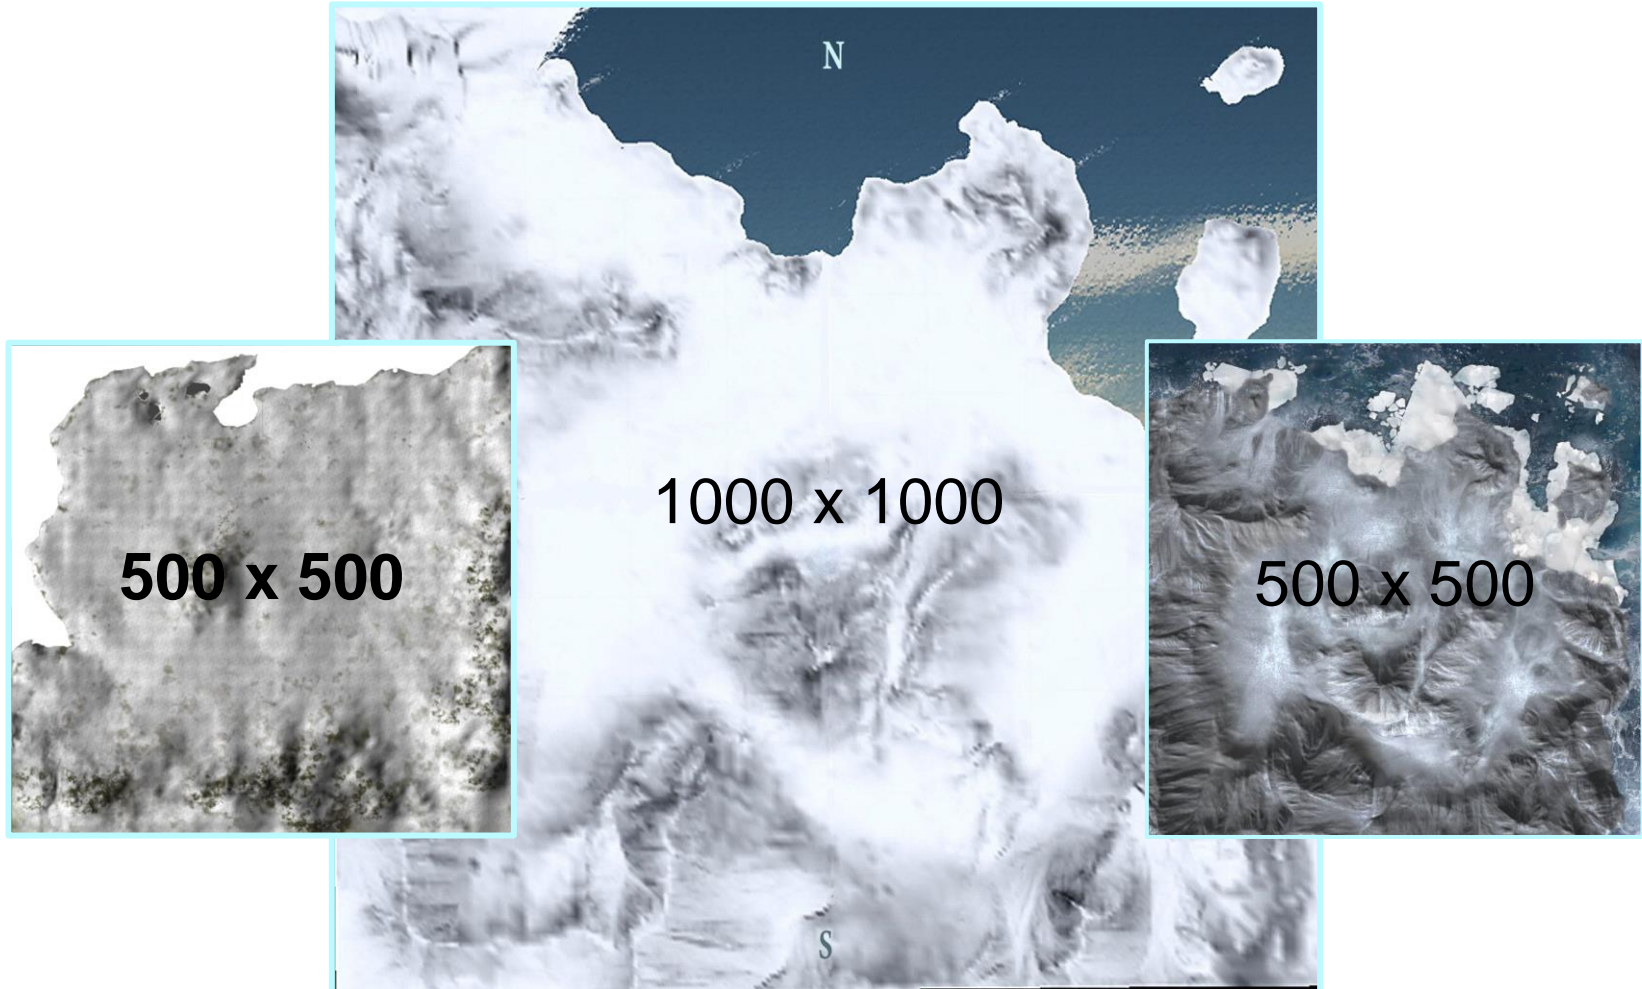

Snap to Finger

Finger-guided camera

Y.E.T.I. Revised Terrain

Y.E.T.I. Highlights

- Revised terrain more interesting and “vast”
- Animations between animals rewarding
- “Juicy” surprise elements rated highly:
 - Animal vocalization in the logbook
 - 3D rotating of scat clues in field
 - Richly colored thermal view

Y.E.T.I. Final Interface

Playtesting

- Product development, e.g., testing an iteration cycle
- Playtest to explore, to refine, and to prove
- See playtestingworkshops.com

Explore

This first workshop focuses on using playtesting to explore a design space. It emphasizes problem finding, exploratory methods, and interpreting qualitative data.

Refine

This second workshop focuses on playtesting as a method to iterate and refine an existing design. It emphasizes asking answerable questions, integrating playtesting into production processes, and making data-driven decisions about game design.

Prove

This third workshop focuses on playtesting as a way of negotiating with teammates and with other project stakeholders. It emphasizes understanding what evidence different stakeholders find persuasive, choosing methods such as user enactments and experience prototyping that allow game designers to keep multiple purposes in mind, and communicating effectively about playtest data.
