

# Write like a Computer Scientist

Majd F. Sakr

# Flow of a Typical Science Project

# Your Contribution to Science

Tell the world of science  
about your contribution.

A drop in the ocean, but it  
keeps science going!

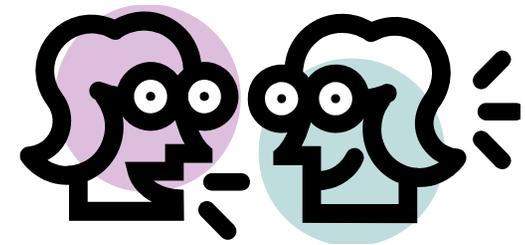

# What do you get from writing a research paper?

Convey an  
Idea

Inform the  
scientific  
community  
about your  
work.

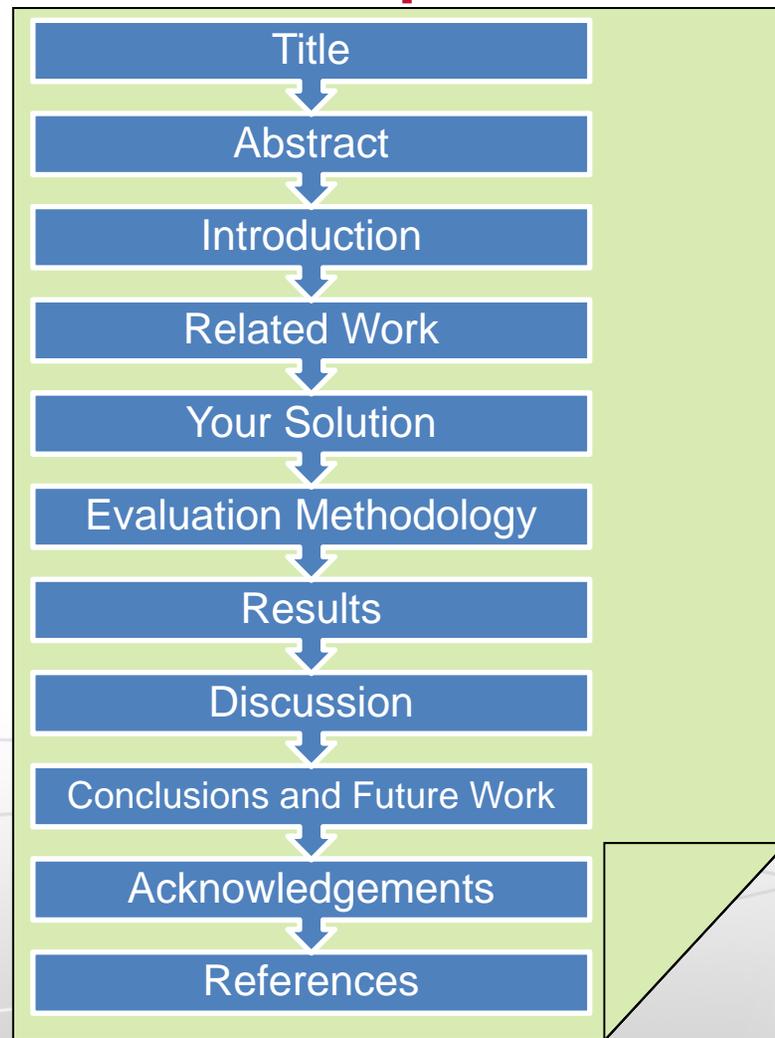

Invite critique  
and engage  
people in the  
same domain

# How to Write a Research Paper?

- + Great Care to be taken while writing a paper
  - + Critical to have a paper that is well written, clear and concise in order for it to be appreciated and have an impact
  
- + General Considerations
  - + Story
  - + Clarity
  - + Conciseness
  - + Grammar and Language

# Sections of a Typical Research Paper

# Choosing a Paper Title

- + A paper's title is very important
- + Choose a title wisely.
- + Thousands will read the title of a published paper
  - + Only hundreds might actually read your paper in full.
- + Title should capture the essence of the paper in the fewest possible number of words.

# Examples of Titles

- + **Go To Statement Considered Harmful**
  - + E. W. Dijkstra, 1968
- + **The Case for the Reduced Instruction Set Computer**
  - + D.A. Patterson et. al. 1980
- + **A Case for Redundant Arrays of Inexpensive Disks (RAID)**
  - + D.A Patterson, Garth Gibson, Randy H. Katz, 1988
- + **The Anatomy of a Large-Scale Hypertextual Web Search Engine**
  - + S. Brin and L. Page, 1996
- + **Xen and the Art of Virtualization**
  - + P. Barham et. al., 2003

# Abstract

- + Critical portion of the paper
  - + Summarize the paper for the reader
  - + A clear and concise abstract is best
- + Abstract and Introduction usually influence the decision of the reader to proceed with your paper or not
- + Best written after the rest of the paper is complete

# Style: Move Structures

- + A **move** is a step taken by writers to achieve part of the overall purpose
- + A **move structure** is a flowchart-like representation of the moves within a genre
- + Structural features of text can be described formally using **move structures**:
  - + Patterns
  - + Transitions
  - + Repeated Moves
  - + Sequencing of Moves

# Abstract Move Structure

## 1. State What Was Done

- 1.1 Identify the research area and its importance
- 1.2 Mention a gap addressed by the work (optional)
- 1.3 State the purpose and accomplishment(s) of work

## 2. Identify Methods Used

- 2.1 Technique and Approach to solve the problem

## 3. Report Principle Findings

- 3.1 Highlight Major Results
- 3.2 Offer a concluding remark (optional)

# Abstract Example

Identify the Research Area

Mention a Gap

Introduce your Work

Describe your work and mention some key findings if required.

Abstract From: **A Case for Redundant Arrays of Inexpensive Disks (RAID)**  
D.A Patterson, Garth Gibson, Randy H. Katz, 1988

# Introduction Section

- + Answer the following questions
  - + **What was the problem?**
  - + **Why is it important?**
- + Not all readers maybe familiar with the problem
  - + Describe the general domain before heading into specifics.
  - + Cite important papers and refer to the work as required.
- + Gradually introduce a gap and motivate the problem.
- + Fill the gap by introducing your work
- + Roadmap for the rest of the paper.

# Introduction Move Structure

General

## 1. Introduce the Research Area

- 1.1 Identify the research area
- 1.2 Establish the importance of the research area
- 1.3 Provide essential background information about the research area

Cite  
Relevant  
Literature

## 2. Identify a Gap or Gaps

## 3. Fill the Gap

- 3.1 Introduce the current work
- 3.2 Preview key findings of the current work

Specific

# Related Work Section

- + Answer the question:
  - + **What have others done on this or related problems?**
- + Can be placed after the Introduction or before the Conclusion sections.
- + Must be thorough and should encapsulate as much of the related work as possible.
  - + Describe other work in a few sentences and compare your work to theirs (optionally).
  - + Reviewers will want to compare and contrast your research with others in the domain

# Solution Overview Section

- Answer the questions:
  - **How did you study the problem?**
  - **What is your proposed solution?**
- Present your solution for a specific instance of the problem.

## 1. Solution Description

- 1.1 Describe the proposed solution in Detail
- 1.2 Effective use of Diagrams can work well in visually describing your solution
- 1.3 Provide formal descriptions of Algorithms and Proofs if they are novel.

Solution Overview Move Structure

# Evaluation Methodology Section

- + Answer the question:
  - + **How can you prove your Solution is effective?**
- + In order to prove that you have an effective solution to the research problem, you will need to evaluate it and present the results
- + Your evaluation can be experimental or theoretical
- + Present your evaluation parameters in detail
- + State any assumptions made
- + Give enough information for reproducibility

# Results Section

- + Answer the Question:
  - + **What did you observe?**
- + Presenting the results in a neat and logical manner is crucial to convincing the reader about the efficacy of your solution
- + Each result set should be displayed in a graphical or tabular forms

# Results Set Move Structure

## 1. Set the Stage

- 1.1 Remind readers briefly how you obtained the results
- 1.2 Refer readers to a graphic that displays that set of results

## 2. Tell the Story of Scientific Discovery

- 1.1 Guide readers through the results as you do one or more of the following:

Identify key findings and discoveries

Describe Important Events

Highlight Unexpected Results

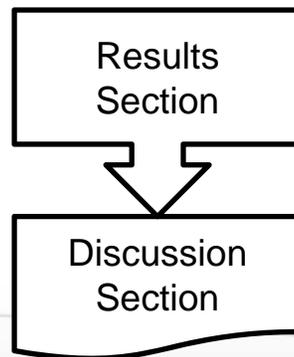

Repeat (as needed) for each set of results

# Analysis and Discussion Section

- + Answer the question
  - + **What do the findings mean?**
- + Discussion can be a separate section or integrated with Results as follows:

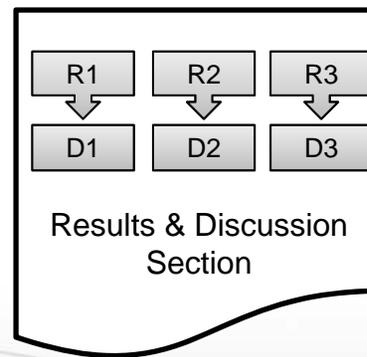

Option 1

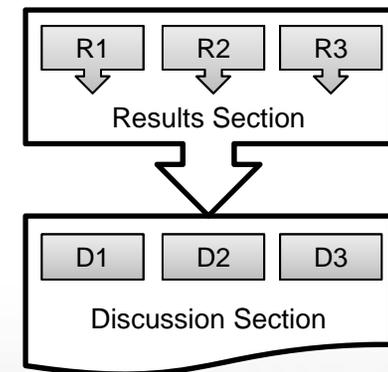

Option 2

Single Result to Present

Option 1

Option 2

Multiple Results to Present

# Final Sections

## + Conclusion Section

- + Very brief summary of the work to remind the reader (optional)
- + Indicate overall implications of your findings
- + What does one learn from your findings

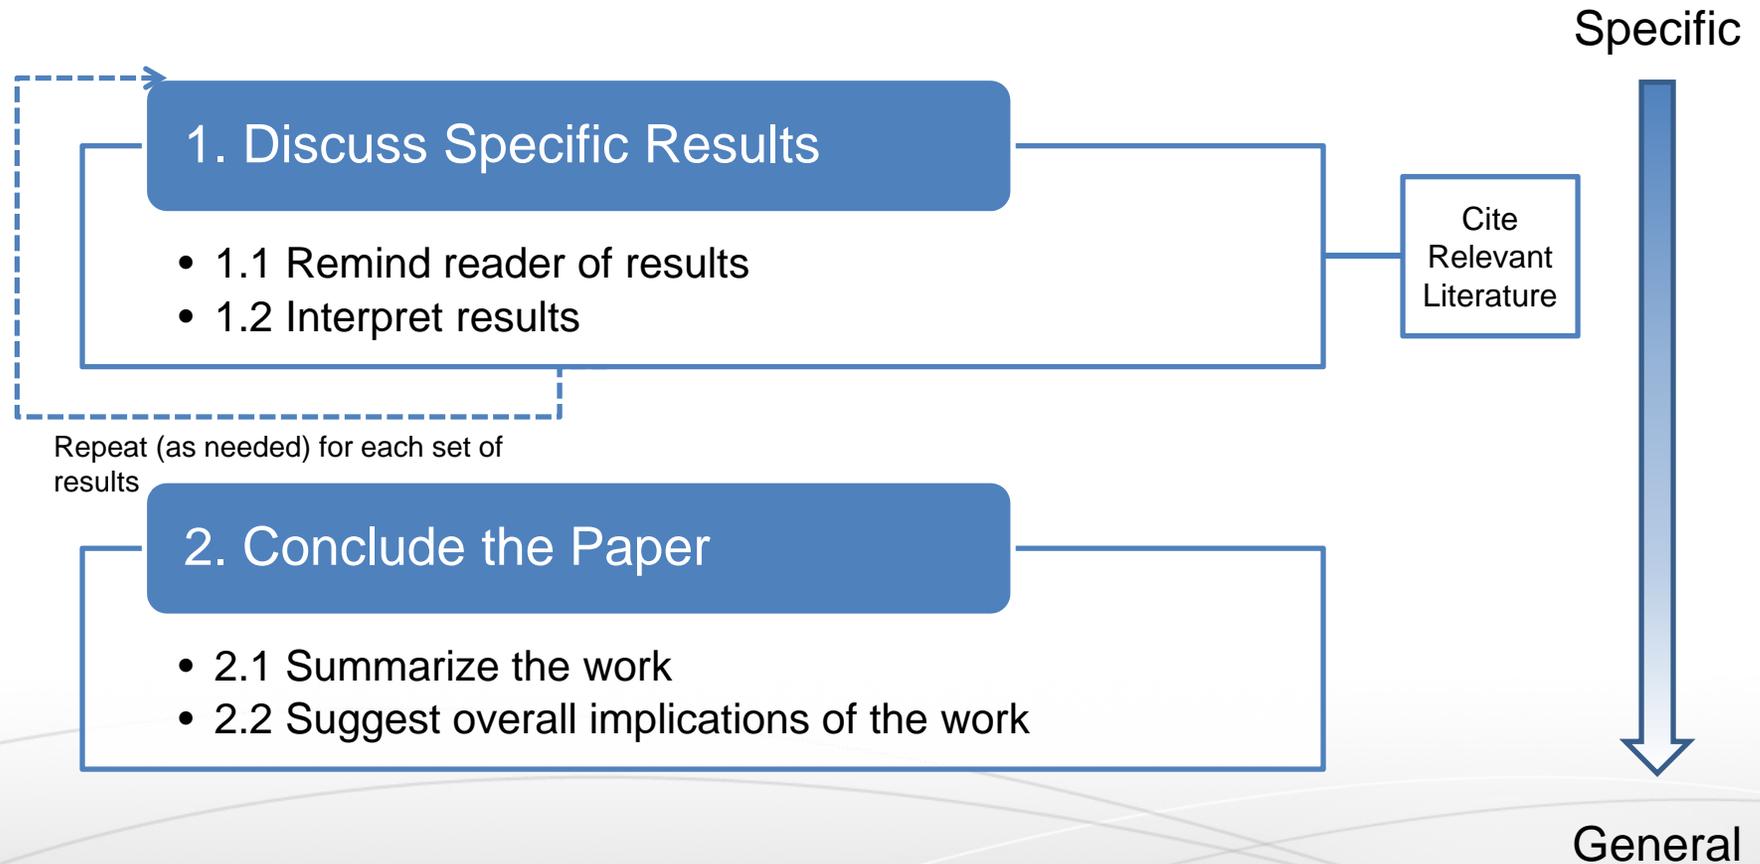

## + Future Work Section

- + Describe future studies based on your conclusions and findings
- + Do not hesitate to mention shortcomings of your work that you intend to cover in the future.

## + Acknowledgements

- + Funding agencies and sponsors (if any)
- + Other people (non-authors) who helped with the work.

# Discussion and Conclusion Move Structure

# A Note on References

1. Bowman, M., Debray, S. K., and Peterson, L. L. 1993. Reasoning about naming systems. *ACM Trans. Program. Lang. Syst.* 15, 5 (Nov. 1993), 795-825. DOI=  
<http://doi.acm.org/10.1145/161468.16147>.

## ACM-style references

- + Follow the reference style as indicated by the conference template strictly.
- + You can use Reference managers such as EndNote or Bibtex to simplify reference management while writing the paper.
